Enshu USA Registration Justification and Support for Used Enshu Machinery Located in North and South America

1. Machine Location and Ownership Tracking: In order to support equipment machinery and comply with export restrictions, Enshu USA Corporation is responsible for the tracking of machine location, the end user, and type of manufacturing. Enshu, Ltd requires that pre-owned equipment be registered and is responsible to report to the Government of Japan for location and application type of each customer. This registration process will require that you provide us with equipment information, including location of the equipment.
2. Support and Machine History: It is difficult to support a machine that does not have a complete paper trail or history of the machine and any modifications or options that have been added since the initial sale of that machine. The registration fee includes updating the Enshu, USA and Enshu, LTD end-user data base.
3. Technical Support and Parts Access: The registration fee of \$750.00 will include access to telephone support, parts questions and procedures. This support will begin once the registration fee has been received along with the machine registration paperwork. If the end-user customer decides not to register the machine, this support will not be provided.
4. Machine Specific Documentation: Upon completion of registration process, Enshu USA Corporation will provide a copy (if available) of the Operation/Maintenance manual, Electrical hard wiring drawings, and a Parts manual.
5. Technical Support Recommendations: Enshu USA Corporation's telephone technical support will work with the end-user within reason to troubleshoot and make recommendations to assist in getting the machine up and running in a timely manner. Field service by Enshu USA Corporation, an authorized Enshu dealer, or the control manufacturer may be recommended if the problem cannot be solved in a reasonable amount of time.
